## Solves Your Chassis Corrosion Problems!

A typical rust damaged frame.

ARMOUR-SEAL protected frame.

That shiny black paint you see on the chassis' of your new vehicles may be pretty, but it simply is not durable against highly corrosive liquid deicers. Want proof? Look at the rusty chassis of a unit with just a few hours on it.

Salt, salt brine, calcium and magnesium chloride are very aggressive deicers. As they melt ice, they also attack and destroy frames, fuel tanks, oil pans, brake cables and wiring harnesses of your expensive fleet.

Unfortunately, today's budgets simply

do not allow these vehicles to be sent away to a **high cost outside contractor** for application of a protective coating, nor can you afford the downtime for your vehicles to be out of service.

So, maintenance and fleet managers are all asking the same common questions, *"Where, can I find an environmentally friendly and durable coating that protects my vehicle chassis' from the devastation of chloride corrosion? One that has an easy application system and is safe for my personnel to apply?"*

## ARMOUR-SEAL has your chassis covered!

### Application System

- **PISTOL-GRIP Spray Gun** simplifies in-shop application.
- Air operated.
- No mixing.
- Variable wet film thickness.
- Dries to the touch in 8-10 hours.

### Environmental Benefits

- **HAPS FREE.** No hazardous petroleum solvents.
- **Low V.O.C.'S** (Volatile Organic Compounds).
- Low odor.
- Non-flammable.
- Quart bottles create less waste.

### Corrosion Protection

- Stops rust & corrosion.
- Resists abrasion.
- Meets the Military Spec TT-C-520-B salt test.
- Passes Chloride Spray Test, exceeding 1000 hours.
- Stops existing rust by blocking oxygen.

### Budget & Economics

- Economical. Only 4 to 6 quarts protects chassis' for years.
- Less shop time.
- Higher resale and trade-in values.
- Longer vehicle retention.
- No risk, 100% money back guarantee.
