

TAGSTER™

Graffiti and Tagging Reliquifier

Application Tip Sheet

TAGSTER™ is a remarkable emulsifier that safely solves your **GRAFFITI** problems without using hazardous solvents. Best of all TAGSTER™ is biodegradable, non-caustic, non-toxic and non-flammable.

TAGSTER™ is neutralized by water. DO NOT DILUTE!

Non-Porous Surfaces - metal, glass, plastic and formica:

First agitate TAGSTER™ by shaking the bottle. **SHAKE WELL.**

Attach trigger sprayer and adjust spray nozzle as needed.

Apply TAGSTER™. Always apply to dry surface, **NEVER** to a wet surface!

- Spray TAGSTER™ directly onto the graffiti. TAGSTER™ is designed to cling to a vertical surface without running off.
- Spray TAGSTER™ onto a clean towel, then apply the treated towel directly to the graffiti.

To **speed up** the reliquifying process, agitate with a brush or towel.

When graffiti is visibly reliquified, simply wipe up with a clean towel or rinse away with water.

Remember, if you rinsed the graffiti area with water, you must first thoroughly dry the surface before reapplying TAGSTER™.

Porous Surfaces - concrete, brick, rock, masonry and wood:

First agitate TAGSTER™ by shaking the bottle. **SHAKE WELL.**

Attach trigger sprayer and adjust spray nozzle as needed.

Apply TAGSTER™ directly to the graffiti. Always apply to dry surface, **NEVER** to a wet surface!

Agitate with a stiff bristled brush, forcing TAGSTER™ into the surface pores where paint has migrated to. Allow TAGSTER™ to work approximately five (5) minutes.

After the graffiti is thoroughly dissolved, wipe away with a clean towel or rinse with water. **Use of pressure washer will blast the reliquified graffiti from the pores of the surface.**

If you need to reapply TAGSTER™, remember to allow the surface to dry completely. Again agitate vigorously to force TAGSTER™ into the pores and let TAGSTER™ work for fifteen (15) minutes. Some graffiti is tougher than other, but it will come off.
