

LUBRA-SEAL®

Salt Spreader Encapsulant

PROBLEM

Drag chains seizing up and breaking!

Spreader box corrosion!

Corroded hydraulic coupling!

SOLUTION

LUBRA-SEAL®

SALT SPREADER ENCAPSULANT

BENEFITS

- ✓ **SPRINGTIME APPLICATION**
Completely encapsulates your spreaders for summer storage, preventing seizure of drag chains/female hydraulic couplings as well as rust on the inside walls of your spreaders.
- ✓ **FALL/WINTER APPLICATION**
The molybdenum disulfide in the LUBRA-SEAL® bleeds down into the linkage of the chain and lubricates it for winter operation, helping to reduce broken drag chains.
- ✓ **COMPLIANCE**
LUBRA-SEAL® cures dry to the touch and will not wash off when it rains like diesel fuel/used motor oil.
- ✓ **CONVENIENCE**
Ready-to-use, no mixing or diluting. Apply and let LUBRA-SEAL® do the work!

FAQs about LUBRA-SEAL®

When do you apply LUBRA-SEAL®?

To keep your spreaders protected all year long, we recommend you apply LUBRA-SEAL® two times a year.

1. Once in the spring to encapsulate and protect your spreaders from rust and corrosion during summer storage.
2. Once in the fall when you do your fall equipment check. This application lubricates your spreaders movable components and protects them during winter operations.

How do I apply LUBRA-SEAL®?

Set up at the back of the spreader and engage the drag chain. While the chain is moving, apply LUBRA-SEAL® directly to the linkage of the chain as it comes across the sprocket. For best results, we recommend using our 3-gallon LUBRA-SEAL® Public Works Applicator.
