

STRIPE-OFF™

Striping Paint Overspray Release

USE ON YOUR STRIPING VEHICLES, EQUIPMENT AND STENCILS

PURPOSE: STRIPE-OFF™ was specifically designed to solve the problem of paint overspray associated with today's quick drying waterborne paints and rubber based enamels used by State DOTs, Municipal Street Departments, County Highway Striping Crews and Private Pavement Striping Contractors. As an added bonus, you will never have to worry about "fisheyes" again, because new **STRIPE-OFF™** absolutely contains no silicones.

BENEFITS: STRIPE-OFF™ can be used to give you four main benefits:

- 1. PREVENTS BONDING** - of paint overspray to your equipment and stencils. Instead, paint overspray attaches itself to the **STRIPE-OFF™**.
- 2. MAKES CLEANUP A BREEZE** - easily flush away any accumulation of paint overspray from your expensive striping equipment, outriggers, gun packs and stencils!
- 3. ELIMINATES** - overspray of asphalt and tar bonding to your equipment.
- 4. DETAIL WORK** - apply to garage doors, curbs, sidewalks, steps, manhole covers, sewer drains grates, retaining walls, and security barriers to make your work stand out from the pack!

APPLICATION:

STRIPE-OFF™ should be applied in the following ways:

- Apply **STRIPE-OFF™** to a dry surface on any area of your vehicles or equipment that will be exposed to paint overspray.
- **STRIPE-OFF™** clings, making it ideal for flat surfaces such as stencils or vertical or oblong surfaces, such as vehicles, outriggers and gun packs.
- **STRIPE-OFF™** is designed to allow paint overspray to accumulate but never bond to the surface. This allows you to determine when you need to remove the paint accumulations. Simply pressure wash or scrape the accumulations and watch them miraculously fall off, leaving behind a clean surface!
- Reapply **STRIPE-OFF™** to a dry surface after removing the old paint overspray accumulations and your ready to go striping!
