

ARMOUR-SEAL

Chassis, Frame & Component Encapsulant

Solves Your Chassis Corrosion Problems!

A typical rust damaged frame.

ARMOUR-SEAL protected frame.

Highly corrosive deicers such as salt, liquid calcium, and mag chloride may be great at melting ice and snow, but they attack the frames, fuel tanks, oil pans, brake cables, and wiring harnesses of your expensive fleet.

ARMOUR-SEAL is an economical, environmentally friendly undercoating that was specifically designed to help protect the expensive equipment used within the deicing industry.

Plus, it's HAPS free and easy for your crews to apply in your own shop.
