PAVE-SAFE™ was developed for cities, counties, state DOTs and asphalt contractors as an environmentally safe alternative to diesel fuel and solvents with dangerously low flash points and high VOCs.

PAVE-SAFE™ does an excellent job of preventing asphalt from sticking to your hopper, hand tools and dump beds.

PAVE-SAFE™ makes clean up of your dirty asphalt equipment easy. Simply apply PAVE-SAFE™, let it set 15-20 minutes, then pressure wash it off and you are done.

APPLICATION

LIGHT ASPHALT REMOVAL: For removal of spills, splatters and overspray on your vehicles, paving equipment or tools, just spray a light coating of PAVE-SAFE™ onto the deposits and let sit for one (1) to five (5) minutes, then pressure wash or steam clean deposits away.

HEAVY ASPHALT REMOVAL: For removal of heavy deposits, like those found on distributor spray bars and paver hoppers, spray PAVE-SAFE™ liberally onto deposits and let sit for fifteen (15) to twenty (20) minutes, then pressure wash or steam clean deposits away.
