

LUBRA-SEAL®

Spreader and Chassis Encapsulant

Application Tip Sheet

Beneficial Spring Application Tips:

First thoroughly wash and **NEUTRALIZE** the chloride film off your de-icing equipment with **NEUTRO-WASH™ Salt and Chloride Neutralizer**. Then rinse thoroughly with **cold water**.

Allow equipment to completely dry. **NEVER** apply LUBRA-SEAL® over a wet surface.

Always apply LUBRA-SEAL® with **RHOMAR's Heavy Duty Public Works Applicator**. The applicator's seals will not shrink and it's unique T-Jet Nozzle assures proper, trouble free application.

Always apply LUBRA-SEAL® with the chains rotating, concentrating on chains pinions and linkage.

Always apply LUBRA-SEAL® to the interior of the Tail-Gate and V-Bottom spreader boxes, concentrating on the conveyor trough, seams, welds and the under-lip of the box. This reduces the need for **sandblasting** and **repainting**. When cured, LUBRA-SEAL® will not deter gravity feed of the spreader.

- To protect your **exterior painted surfaces** apply clear **MET-CON 3000™**.
- It is **not necessary** to rotate your chains during summer storage. If you do, always **remember** to reapply LUBRA-SEAL®.

Beneficial Fall Application Tips:

With hydraulics hooked up and chains rotating, apply LUBRA-SEAL® thoroughly to the drag chain, concentrating on linkage and pinions.

Apply LUBRA-SEAL® to the interior of your dump-beds prior to inserting the spreader to prevent **corrosion** of the metal bed.

Reapply LUBRA-SEAL® when spreaders sit idle between storms.

Beneficial Allied Areas of Use:

Apply to **gate channel, spinners** and **hydraulic quick disconnects**.

Apply to **angle-iron bed runners** and complete **underside of spreader**.

Apply to Salt-Dome **conveyors**.

Apply to the **door channels** and **rollers** of the Salt-Dome building.

Apply to **street sweepers** and **herbicide equipment** to prevent corrosion.
